Vrinda Store: Annual Sales Analysis 2022

An interactive Excel dashboard on sales, customers, channels and order outcomes for an online fashion retailer

Project type	Portfolio project built on a publicly available practice dataset (not client work)
Tools	Microsoft Excel: Pivot Tables, Pivot Charts, Slicers, formulas (IF, TEXT), dashboard design
Data	31,047 order lines | 21 columns | calendar year 2022 | all values in INR
Author	Abhijit Sharma, B.Tech Computer Science (Data Science)

1. Executive summary

This project converts a year of order-level data from Vrinda Store, an online fashion retailer that sells through marketplaces, into a single filterable Excel dashboard. The store recorded **₹2.12 crore** in gross sales across 31,047 order lines in 2022. **Women generate 64%** of sales, three marketplaces (Amazon, Myntra, Flipkart) bring about **80% of orders**, five states contribute **52.5%** of revenue, and **7.75%** of order lines end as returned, cancelled or refunded. This report explains the problem, how the dashboard was built, what it shows, and which actions the numbers support.

₹2.12 Cr	31,047	₹682	92.25%
Gross sales (₹2,11,76,377)	Order lines (28,471 unique order IDs)	Average value per order line	Order lines delivered

2. Problem statement

Vrinda Store needs an annual report for 2022 that explains **who its customers are, where and through which channels they buy, and how their orders turn out**, so the team can plan growth for 2023. The data is a single raw worksheet of 31,047 rows, which is too large to read directly and cannot be used by a manager without summarising. The goal of this project is to turn it into a one-page dashboard that a non-technical user can filter and understand in minutes.

Business questions the dashboard answers

1. How do monthly sales and order counts move together through the year?
2. Who buys more, women or men?
3. What happens to orders: how many are delivered, returned, cancelled or refunded?
4. Which states contribute the most to sales?
5. How do age group and gender relate to order volume?
6. Which sales channels bring the most orders?

3. Dataset

Source	Publicly available practice dataset of online fashion store orders (not real client data)
Records	31,047 order lines (28,471 unique Order IDs, because one order can hold several lines); 28,437 unique customers
Key fields	Order ID, Cust ID, Gender, Age, Date, Status, Channel, SKU, Category, Size, Qty, Amount, ship-city, ship-state, B2B

Period	Calendar year 2022; currency INR for every row
Quality checks	No blank cells and no fully duplicated rows were found in the worksheet

4. Solution process

1. **Understand the data.** Reviewed all 21 columns, the date range, currency and order statuses (Delivered, Returned, Cancelled, Refunded), and checked for blanks and duplicates.
2. **Prepare helper columns with formulas.** Added `Age Group` using `=IF(Age>=50,"Senior",IF(Age>=30,"Adult","Teenager"))` and `Month` using `=TEXT(Date,"mmm")` so ages and dates could be grouped in pivot tables.
3. **Summarise with Pivot Tables.** Built five pivot tables: sales and order count by month, sales by gender, orders by status, sales by state, and orders by channel (with an age group by gender view).
4. **Choose the right chart for each question.** A combined column and line chart on two axes for sales versus orders; pie charts for gender, status and channel shares; a bar chart for states; a clustered column chart for age group by gender.
5. **Add interactivity.** Connected three slicers (Channel, Month, Age Group) to the charts so every visual updates together.
6. **Assemble the dashboard.** Placed six charts and the slicers on one sheet, "Annual Report 2022", with a consistent dark chart style and a title banner.

5. The dashboard

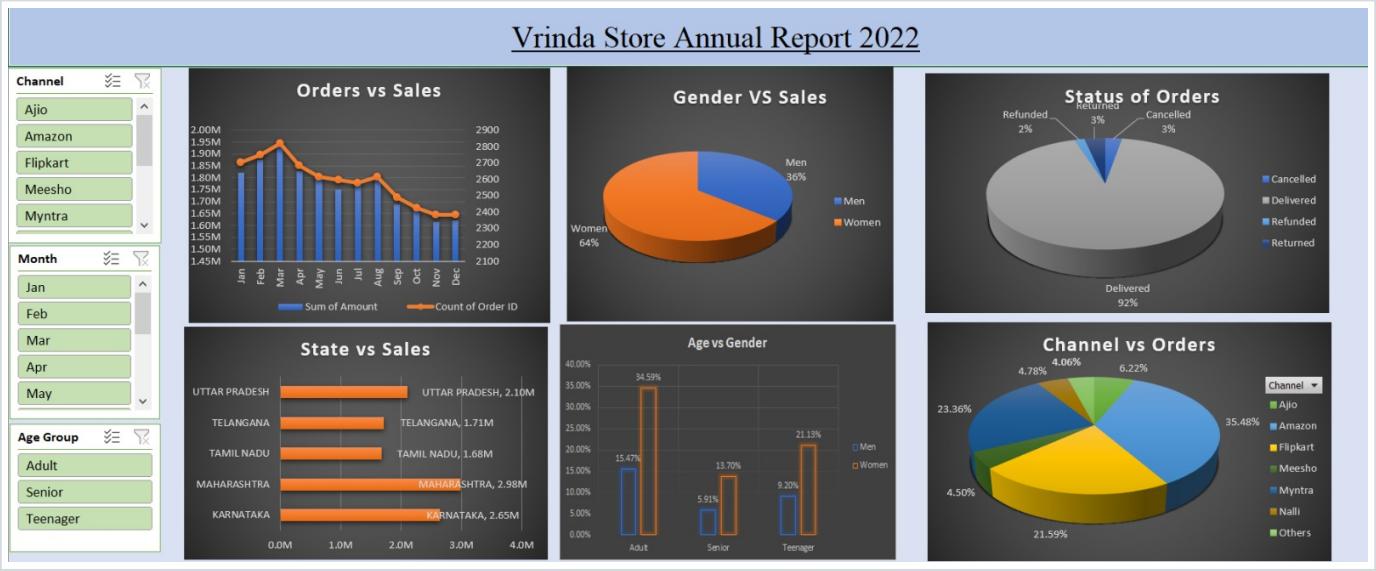

Figure 1. Vrinda Store Annual Report 2022: six linked charts with Channel, Month and Age Group slicers.

How to use it: pick any channel, month or age group in the left panel and all six charts recalculate. Clear a filter with the funnel icon in the slicer header.

6. Key findings

1 **Women drive the business.**
Women account for **64.05%** of sales (₹1.36 crore) and 69.4% of order lines; men account for 35.95%. Men, however, spend more per order line (**₹802 vs ₹629, about 27% higher**), so they are a smaller but higher-value segment.

2 **Sales peak early in the year and fade towards December.**
Sales peaked in March at ₹19.28 lakh (2,819 order lines) and fell to ₹16.15 lakh in November, a **16.2% decline**. Sales and order count move almost in step, and the value per order line stays near ₹680 every month, so the fall comes from fewer orders rather than smaller baskets. (See the date caveat in section 9.)

3 **Five states generate over half of all sales.**
Maharashtra (₹29.83 lakh, 14.1%), Karnataka (₹26.46 lakh), Uttar Pradesh (₹21.05 lakh), Telangana (₹17.12 lakh) and Tamil Nadu (₹16.78 lakh) together contribute **52.5%** of sales. The top three alone contribute 36.5%.

4 **Three marketplaces carry the business.**
Amazon (35.48%), Myntra (23.36%) and Flipkart (21.59%) bring **80.4% of order lines**. Ajio, Nalli, Meesho and others share the remaining 19.6%. Average value per order line is similar on every channel (₹664 to ₹690), so channels differ in volume, not in price level.

5 **Most orders complete, but returns and cancellations are not trivial.**
92.25% of order lines are delivered. Returned (3.37%), cancelled (2.72%) and refunded (1.67%) lines add up to 7.75% and represent **₹14.66 lakh, or 6.9% of sales**. The rate is similar across channels (6.8% to 8.1%), which suggests the cause sits in products or fulfilment rather than in one platform.

6 **Adults aged 30 to 49 are the largest segment; women lead in every age group.**
Adults make up 50.1% of order lines, ages 18 to 29 (labelled "Teenager" in the workbook) 30.3% and ages 50+ 19.6%. In all three groups women place about **2.2 to 2.3 times** as many order lines as men.

7 **Supplementary: Sets are the revenue engine.**
Computed from the same dataset: the "Set" category delivers **49.6% of sales from 39.9% of order lines** (₹848 per line versus ₹475 for kurtas). Sets and kurtas together account for 73.0% of sales.

7. Supporting figures

Top 5 states by sales

State	Sales	Share
Maharashtra	₹29,82,659	14.1%
Karnataka	₹26,46,358	12.5%
Uttar Pradesh	₹21,04,659	9.9%
Telangana	₹17,12,439	8.1%
Tamil Nadu	₹16,78,244	7.9%

Order lines and sales by channel

Channel	Order lines	Sales
Amazon	35.48%	₹75,19,933
Myntra	23.36%	₹49,41,540
Flipkart	21.59%	₹45,73,301
Ajio	6.22%	₹13,31,427
Nalli	4.78%	₹10,15,329
Meesho	4.50%	₹9,27,606
Others	4.06%	₹8,67,241

Order status

Status	Order lines	Share
Delivered	28,641	92.25%
Returned	1,045	3.37%
Cancelled	844	2.72%
Refunded	517	1.67%

Gender comparison

Gender	Sales	Share	Lines	Avg/line
Women	₹1,35,62,773	64.05%	21,553	₹629
Men	₹76,13,604	35.95%	9,494	₹802

8. Recommendations

1. **Focus campaigns on women aged 30 to 49 and on Sets.** This is the largest, highest-volume segment and the most valuable category.
2. **Test menswear bundles and offers.** Men are 36% of sales but spend about 27% more per order line, so a small lift in men's order volume has an outsized effect.
3. **Reduce dependence on three marketplaces.** With 80% of orders on Amazon, Myntra and Flipkart, a policy or fee change on one platform would hurt. Grow Ajio, Nalli, Meesho or an own store as a second leg.
4. **Investigate returns and cancellations by category, size and SKU.** These leak 6.9% of sales; recovering even one percentage point is worth about ₹2.1 lakh a year.
5. **Plan a second-half demand push.** Sales fell 16% from March to November; schedule festive-season campaigns and stock early, after confirming the trend with clean date data.
6. **Defend the top states and test under-penetrated ones.** Maharashtra and Karnataka lead; compare sales per state with population to find states with room to grow.

9. Data notes and limitations

- **Order lines, not unique orders.** The dashboard counts rows (31,047); the number of unique Order IDs is 28,471.
- **Date pattern.** Every row falls on the 4th, 5th or 6th of a month (36 distinct dates in total). The monthly trend therefore reflects a few days sampled per month and should be confirmed against the source system before it is used for forecasting.
- **Gross sales.** The ₹2.12 crore total includes returned, cancelled and refunded lines; delivered-only sales are ₹1.97 crore (₹1,97,10,544).
- **Age group labels.** The formula labels ages under 30 as "Teenager", but the youngest customer is 18, so "Young adult" would be a more accurate name.
- **Minor labelling inconsistencies** (for example 14 rows with the category "Womenestern Dress" and 6 rows with "Men" as the size) are below 0.1% of rows and do not change the dashboard results.
- **Revenue only.** The dataset has no cost or margin data, so conclusions are about sales, not profit.

10. Skills demonstrated

> Pivot Tables and Pivot Charts | Slicers and interactive filtering | Excel formulas (IF, TEXT) | Dual-axis combo charts | Data validation checks | Dashboard layout and storytelling | Turning numbers into business recommendations

Note: this is an independent portfolio project using a public practice dataset. All figures in this report were verified against the dataset in the accompanying Excel workbook.
